## SKILLS

---

**Languages:** JavaScript, TypeScript, C++, Python, Java, C, SQL, HTML, CSS

**Frameworks/Tools:** Node, React, Redux, AWS, GCP, Jest, jQuery, Bootstrap, Jenkins (CI/CD), Kubernetes

## WORK EXPERIENCE

---

### FULL-STACK DEVELOPER

Nuvalence | Remote | August 2020 - Present

- Implemented end to end flow for translations of dynamic values in emails and notifications allowing for international expansion and acquisition of multi-language clients
- Unified and improved messaging development work streams granting developers a consistent experience across the platform
- Work directly with client team to resolve platform related issues and develop structured front-end

### PLATFORM ENGINEER

Lifion by ADP | New York, NY | January 2019 - December 2019

- Migrated messaging queue from Amazon Kinesis to Amazon SQS, phasing out deprecated technology
- Introduced Honeycomb library to trace core ETL functions and provide visualizations of data
- Overhauled error handling modules to clear clutter from logs and reduce debugging time
- Removed Babel from major projects, speeding up compilation and lowering module dependencies
- Led adoption of cross-team updates on modules

### FRONT-END DEVELOPER

Faire Wholesale | Kitchener, ON | May 2018 - August 2018

- Integrated FedEx shipping label automation allowing simple returns for customers & shipping for sellers
- Created numerous emails using Moustache to be sent out to customers to improve retention
- Shipped features to production in a fast-paced environment significantly increasing redistribution channel visitation and conversion

### FRONT-END DEVELOPER

Bespoke Metrics | Toronto, ON | September 2017 - December 2017

- Implemented audit system for data admins validating user entered data
- Internationalized COMPASS web application allowing for users to view the site in their language of choice
- Created auto-formatting number field which would update text's appearance as user types

## EDUCATION

---

### BACHELOR OF MATHEMATICS

General Mathematics, Co-op | University of Waterloo | September 2015 - April 2020

## PROJECTS

---

### TWEET SWEEP | JavaScript

July 2020

- React and Node application that queries Twitter's API to find the 1000 most recent tweets with the keyword used, sorted by number of interactions and with duplicates filtered

### WHO'S THAT POKEMON? | JavaScript

September 2018

- React application querying PokeAPI to generate random Pokémon sprite, allowing user to guess the name
